

ABSTRACT OF THE DISCLOSURE

A heat sealer includes a base configured to be mounted on a tabletop, a first jaw connected to the base, and a second jaw operatively aligned with the first jaw. An actuator is coupled to the second jaw to provide relative motion with respect to the first jaw. A heating device is coupled to the first and second jaws for heating the jaws to a set temperature to enable material to be contacted and welded when the first and second jaws are in a closed position.
